

30-day campus rollout

A suggested implementation plan for university teams

Days 1-7 | Name an owner and verify routes

Assign a lead and deputy. Map security, wellbeing, safeguarding, reporting, students' union advice and independent support. Check opening hours, accessibility and out-of-hours cover. Complete the contact sheet. Have relevant specialists review the content.

Days 8-14 | Test the student journey

With volunteers and fictional scenarios, test whether someone can find support on a phone, understand privacy limits and reach the correct team. Include commuter, international and disabled student perspectives. Fix broken links, unclear language and inaccessible formats.

Days 15-21 | Prepare staff and student leaders

Run a short disclosure-response briefing using toolkit page 6. Explain escalation, secure records and referral boundaries. Agree who handles follow-up. Brief society and accommodation teams without turning peers into investigators.

Days 22-30 | Share and check uptake

Publish the verified local pack through induction, the student portal, accommodation and societies. Pair print notices with an accessible HTML or text version. Explain who to contact for corrections. Gather optional feedback about clarity and ease of finding support.

Measure useful outcomes

Track contact-link availability, training coverage and whether users can find the right route. Use aggregate feedback. Do not interpret fewer reports as evidence of less harm or collect sensitive disclosures in general surveys.

Keep it current

Review each term and after service changes. Record the owner, revision date and next review. This is a suggested plan; local policy and safeguarding arrangements determine implementation.
